

# BNBooking – Airbnb Clone

A full-stack booking web application

Built by OM (@hardbuilder)

# Introduction

- BNBooking is a full-stack Airbnb-style web application.
- It allows users to browse, create, update, and delete rental listings.
- Built using Node.js, Express, MongoDB, and EJS for server-rendered views.

# How It Works

- Users can view all available listings on the homepage.
- Each listing shows details like image, location, and price.
- Users can add, edit, or delete listings using forms.
- Data is stored in MongoDB, and forms use method-override for PUT/DELETE.

# Tech Stack

- Backend: Node.js, Express.js
- Frontend: EJS, Bootstrap 5
- Database: MongoDB (via Mongoose)
- Extras: Method-Override, dotenv, Font Awesome

# Features & Uses

- Create, edit, and delete property listings.
- Display full details of each listing.
- Simple and responsive UI for quick navigation.
- Useful for showcasing short-term rental properties.

## Advantages

- Easy to deploy and maintain.
- Server-rendered views for faster page loads.
- Modular project structure for scalability.
- Bootstrap UI for responsive design.

# Future Scope

- User authentication and login system.
- Add booking and payment integration.
- Rating and review system for listings.
- Map integration (Google Maps API) for geolocation.
